A healthy skin is naturally beautiful ...

Aesthetics is a distinctive profession, without a doubt one of the most beautiful, as it associates technology with the human being.

BIOFIL's mission is to meet ALL of the skin's vital needs so as to provide it with a healthy and balanced life in order to allow it to progress harmoniously in time.

At every stage of the Biofil's creation, each option chosen has been dictated by the skin revitalization and the will to enhance the value of the beautician's abilities with the concern of offering a complete, efficient and especially personal service.

CYTOPHYLACTIE is the name we have given to this technology : cyto for cells and phylactie for protection.

The cytophylactie

The fundamental principle of the complete technology lies in one simple observation :

« Beautiful skin is above all a harmonious skin »

To obtain this, the cellular life of the entire skin must be taken into consideration. In fact, normal functioning skin cells engender a healthy and balanced skin.

This process has a name : **the cellular revitalization.**

Our way of life remains one of the factors of the deficiencies' origin. Consequently the cells grow tired and the ageing process accelerates. The reduction of mineral, vitamin or oxygenation reserves cause a sort of cellular asphyxia.

The absorption of cytobiological elements that possess perfect information bring increased vigour and progressively correct all weaknesses. As the principal objective is the fight against ageing by general stimulation of all cells to obtain a new vitality well above average, it is therefore logical that the cytobiology-cosmetics may help the healing of tissue, the elimination of stretch marks and other skin problems.

BIOFIL LABORATORY

www.biofil.eu

Eight products and many applications

The treatment

To establish a preferably personalized treatment, the different factors, such as problems to be treated, internal causes and their influences, the way of life, age, heredity, corporal rhythms, must be studied with the utmost attention.

From this analysis, where the points to be modified are looked for, the treatment outline will be created. Consequently, it should be possible to meet all the skin's requirements. The skin remains the one and only master.

It is certain that sound studies, continuous training, psychological knowledge of the client and complementary technological approaches - such as, for example, the Biofil rhythmical massage and the lymphatic drainage - a sense of observation and analysis enable this work to be approached with determination.

The BIOFIL range

To fully understand the conception of the Biofil products, you must ONLY think about the cellular life and NOT about the different problems (dry skin, wrinkles, ...). In this way, unlike the other cosmetic ranges where each case creates a product, Biofil prefers to rectify the cellular weaknesses to solve all skin problems. The great advantage lies in the opportunity to create a rational range where each product is essential. Obviously, in this way, each product can have several uses. Furthermore, this technology requires the creation of a personal treatment composed of care in a beauty centre and daily application of the products at home. In this way the beautician may carry out a more creative and passionate job.

The compound

The main compound is made up :

1. Phyto-cytological extracts with a composition the most complex on the cosmetic market.
2. Un complexe of 4 vitamins - A,C,E,F

The cytological extract works directly on the cellular metabolism and the general regularization of the skin. It is thanks to this that it is possible to devise a range including only 8 product types while preserving the diversity of the treatment and their effectiveness. This rationality is voluntary so as to avoid wastage, because each product is essential and indispensable to guarantee a good skin metabolism. Finally, ALL the products contain cytological extracts which gives this range a high revitalization capacity.

BIOFIL LABORATORY

www.biofil.eu

Eight products and many applications

Products for cleansing *(Face & Body)*

Bio-active milk

1. Perfect but gentle cleansing of the face
2. Very good cleanser
3. Cleansing milk for the eyes
4. Revitalization effect given by the cytological extracts
5. Gives a pleasant sensation of freshness

Bio-active lotion

1. Restores the skin's PH which is slightly modified after the milk application.
2. Completes the face cleaning.
3. Cleans and prepares the body.
4. Preparation of the skin for the beauty centre and home treatment.
5. Improvement of the peripheral vascularity.
6. Treatment of dry skin.
7. Anti-inflammatory action.
8. Prevention treatment of scalp.
9. Revitalization effect given by the cytological extracts.
10. When mixed with the mask cream to be mixed **ONLY** in the beauty centre gives a slight peeling effect

Revitalization - Regeneration

There exists a big difference between the notion of Revitalization (Bio-active Cream) and Regeneration (Intensive Cream). With REVITALIZATION, the cellular functioning is strengthened, giving a **Qualitative** effect, while the REGENERATION concerns the cellular structure with a more **Quantitative** objective.

Of course, these two effects are complementary and it is not always easy to determine the revitalization from the regeneration. Often it is experience that enables to apprehend all the differences between these actions. However, as a general rule the Intensive line is used when the tissues must manifestly be regenerated, as for example with wrinkles, stretch marks, grazes, psoriasis,....

BIOFIL LABORATORY

www.biofil.eu

Eight products and many applications

Treatment creams (*Face and Body*)

The Biofil range has two specific creams that contain their own cytological complex for :

BIO-ACTIVE Cream = **Revitalization**

INTENSIVE Cream = **Cellular regeneration**

Bio-active cream

1. Revitalization of the skin (Face and Body)
2. Protection against external aggression
3. Regularizes and conserves the moisture of the skin
4. Strengthens colourless and lifeless skin
5. Treatment of young or normal skin
6. Basis of all Biofil treatment
7. Suitable for greasy skin
8. Tones up the face

Intensive cream

1. Regeneration of the skin (Face and Body)
2. Treatment of stretch marks
3. Tones down wrinkles of the face
4. Increases cellular oxygenation
5. Treatment of all skin problems, eczema, burns
6. Suitable for dry skin
7. Treatment of acne, cysts, spots
8. Treatment of psoriasis
9. Improves blood circulation and the irrigation of the conjonctive tissue.
10. Treatment for blotches, varices and varicose veins in the legs
11. For fragile and fine skin
12. Treatment of the wound after a long period of keeping in bed

BIOFIL LABORATORY

www.biofil.eu

Eight products and many applications

Mask cream

1. Stimulation of the skin
2. Activates the blood circulation
3. Regeneration effect with Intensive Cream
4. Excellent for colourless and lifeless skin
5. Regularization of skin moisture
6. Increases cellular oxygenation
7. Gives a soft and fresh skin
8. Treatment for acne and greasy skin

Massage Oil

This oil can be used alone during a relaxing massage as well as face than body. But, its major role is, in beauty saloon, to be mixed with the cream(s) or the mix between cream and phial for making the massage easier.

A few drops of this massage oil are more than enough to realize a massage of at least 15 minutes.

Bio-active fluid (*Face and Body*)

This is the best product to show the spirit of rationality in which the Biofil's range has been developed. In fact, it has a multitude of applications which are at the same time different and yet complementary.

First of all, it's a **fluid cream** having all the characteristics of a cream but with a different texture. Taking this texture into account, it is used more as a **Day Cream** but it can also be used as a **Night Cream**.

Furthermore, this fluidity associated with its revitalizing cytological structure enables it to be used as a **Body Milk**. It would be ideal for relaxing legs that feel heavy after a long day's work. For that matter, this vascularity aspect is brought to the fore during pregnancy to avoid swelling of the legs.

Equally, thanks to this fluidity, by the addition of an effective sun filter with an exposure value of 14/16 - 16 = total sunblock, this product also becomes a perfect **Suntan Lotion** and through its moisturizing and calming properties due to its cytological composition, it is an **After-sun Lotion**.

It is true that, at first glance, one could be surprised at the variety of applications offered, but, when thought about, the following elements : the fluid texture, the cytological composition and the sun protection exposure value, absolutely justify this particularity.

BIOFIL LABORATORY

www.biofil.eu

Eight products and many applications

Bio-active fluid *(Face and Body)*

Day cream

1. Revitalization and regeneration of the skin
2. Make-up base
3. For men, to be used as an after-shave
4. Corrects pigmentation defects (Face)
5. Moisturises with the bio-active Cream
6. Gives a pleasant sensation of freshness

Body milk

1. Moisturizing of the body
2. Favours skin regeneration when combined with the Intensive cream
3. Tones up the body skin
4. Circulation with the Intensive Cream
5. Prevents swelling of the legs (pregnancy)
6. Prevention and treatment of stretch marks at puberty
7. Treatment of the scalp (dandruff, eczema,..) and also scalp psoriasis
8. Corrects pigmentation defects (body)

Suntan and After-sun lotions

1. With its high sun filter, protects the skin very well
(for the whole family, including children)
2. With its revitalization effect, favours tanning
3. Used as an after-sun, moisturises and fixes the suntan
4. Treatment for sunburn

Cellular regeneration phials

Serums phials : There are two kinds of serum : **Cellular serum** and **Intensive serum**. They contain two main kinds of extracts : the cytological (20 %) and the biological.

Fields of applications :

In the beauty centre, the beautician can use the phials on their own (after cleansing and before the massage with the cream) or mixed with the cream and mask. In which case, when a cream and a phial are mixed together a NEW PRODUCT is created, but it must be used immediately.

Cellular serum : More particularly elaborated for anti-wrinkle treatment with a slight tensor effect, this phial may also be suitable in cases of toning up, skin moisture, ... - **Intensive Serum** : Having a specific cytological complex, it is advisable to suggest its use in the case of regeneration.

BIOFIL LABORATORY

www.biofil.eu

Eight products and many applications

Treatment in the beauty centre

Treatment in the beauty centre includes 4 cares : **the cleansing, stimulation, massage and mask application.**

As the action's basis is to revitalize the skin's cells, bear in mind during the development of the care's outline that it is included in a homogeneous set.

At each stage of the care, a global massage of the face, chest or body must be combined with very local applications of products, and this in order to treat the problem zones in depth. This specific action will make a very good impression on the immediate result.

The massage is always done manually and the moves that are made in a light stroking style are soft yet firm. Avoid *electrical equipment* such as the high frequency or ionization because the assimilation of the cytological particles are not able to occur.

1. The cleansing and cleaning

Remove the make-up meticulously from the face, neck and décolleté with the Bio-active milk so as to have perfectly clean and clear skin. Also use the milk make-up remover for eyes.

Complete this cleaning with the use of the Bio-active lotion in order to refresh the face, restabilize the acidity level and favour absorption of the cellular filtrates. For a better effectiveness, the application of the lotion will be done as slowly as possible, without neglecting any parts of the face. So as to complete the cleaning, prepare a mixture of the **Mask Cream** and the **Lotion** and apply it to the face. The resting time is 5 minutes and a light massage may be performed that will give a **light peeling effect**.

Several proportions are conceivable, but it must simply be remembered that :

- For greasy skins, acnes and blotches, the proportion of the Mask Cream will be more important than the Bio-active Lotion, even going as far as using this mask pure.
- For normal skins requiring only a cleaning in depth, the proportion of the Mask Cream will be equal to the Bio-active Lotion.
- For dirty skins and blackheads, the proportion of Bio-active Lotion will be greater than the Mask Cream.

BIOFIL LABORATORY

www.biofil.eu

Eight products and many applications

Treatment in the beauty centre

2. The stimulation

This stage is carried out by the application of a phial. Two serum phials are available for use. As a rule, the stimulation has a strong but brief effect. The stimulation phials will be disposed on the whole of the face and then the zones to be treated will be insisted on by small circular movements. Leave to rest for 5 minutes before continuing the care.

3. The massage

For the massage one of the two creams (Bio-active or Intensive Cream) is used on its own or mixed with part of the chosen serum phial. This mixture increases the effect of the cream. It is not compulsory but is recommended when the repair phial has been chosen, for example, as in the case of blotches. Of course, only observation and analysis enables to determine the priorities and the choice of phials and possible mixtures.

4. The mask

As for the massage, the Mask Cream can be used on its own or mixed with part of the phial. This mixture enables to modify the structure of the mask. The rest time is approximately 15 minutes. Please note that this mask does not dry up.

BIOFIL LABORATORY

www.biofil.eu

Eight products and many applications

The mixtures with the phials

As with a phial, the serum is used in full during the care, in the assumption that where you choose to mix the phial with the cream and the mask, the proportions must be thought about. This reflection opens the door to a larger development of the care in the beauty centre, because depending on the chosen proportions, the effects will obviously vary.

For, it must be known that **each mixture, whatever the proportion chosen, leads to the creation of a NEW PRODUCT**. Admittedly, an unstable product that needs to be used immediately, but still a product with effects of its own.

Therefore, thanks to this characteristic, BIOFIL enables to obtain personalized beauty centre cares that accentuate the results even more. With these mixtures, the cytophylactic finds all its dimension and allows all audacities. The mixtures' technique give the beauty centre care a more personalized orientation. It will be possible to modulate the different stages (stimulation, massage, mask) so as to better define the problems to be treated. In the beginning, it must be realized that each phase has its own effect :

1. Stimulation

Its effect will be to begin the care, a sort of starter, wakening of the skin. This phase must be put into evidence in the case of colourless skin missing brightness or when it is necessary to give a little « lift » to the tired face. The assimilation time of the active matter is approximately 6 to 8 hours.

2. Massage or Modelling

Its effect is far deeper and fundamental. It's the moment where the structure of the skin is worked upon. Moreover, a slow massage favours this effect. This phase stands out when restructuring of the skin is wanted. For example, wrinkles, dry skin, fortifying,... Here, the assimilation time of the active matter is particularly long as it may last up to 3 to 4 days.

3. The application of the mask

Its effect is essentially double : «To sooth and to favour blackhead and spot elimination». Schematically : «To sooth» in the case of blotches and «To favour blackhead and spot elimination» in the case of acne. The assimilation time of the active matter has a duration of 18 to 24 hours.

To favorite a type of treatment, you must put at least a half of phial selected in the phase choised. The remaining of phial is separated or not between the order phases. For exemple, If you decide to realize a soothing treatment, you must mix a half of phial selected with the Mask cream. The rest of the phial could be separate eg 1/3 in stimulation and 2/3 mix with the cream.

BIOFIL LABORATORY

www.biofil.eu

Eight products and many applications

Treatment Step by Step

1. Cleansing with Bio-active milk and Bio-active Lotion
2. Mixture of the Mask cream with the Bio-active Lotion to complete the cleansing
3. Selection of the cream(s) (Bio-active, Intensive, Fluid) and the phial(s) (Cellular, Intensive) which may be used according to the observation and the analysis
4. Selection of the type of treatment among the 3 possibilities : Stimulation, restructuring or soothing according to the observation and the analysis.
5. Division of the phial according to the treatment selected
6. Application of the part of the phial decided upon in the phase of stimulation.
6. Mixture of the Phial with the cream. Don't forget to add a few drops of massage oil this mixture. And, Realization of the massage for the phase of restructuring .
7. Application of the Mask mixed with the remaining part of phial in the phase of soothing or spot elimination
8. After having taken off the mask, application the Bio-active fluid
9. Plannification of the home treatment according to the result obtained

The selected phial(s) and the mixtures are always used completely

The home care

As quite obviously the objective of the BIOFIL treatment is to give back the skin cells a new vigour in the way of restabilizing the whole of the skin, it is essential to prescribe home care to be done daily. As for BIOFIL one of the priorities is to avoid wastage, the basic home treatment will be made up of MILK, LOTION and a CREAM, either the Intensive or the Bio-active cream. Daily use, morning and evening, of these three products is a minimum to be done in order to obtain a true result at the cellular revitalization level.

In certain cases, the use of the mask cream turns out to be essential. It is used after having meticulously cleaned the face and put on the care cream. It is left to rest for 10 minutes and is taken off with warm water. After, a little bit of care cream is put back on. The effect of this mask is astonishing, which is why it may be advised as a complement to the basic treatment while taking care not to put it on more than 2 to 3 times a week. Thanks to its cytological composition, it constitutes on its own a regenerator and a revitalizer that should not be neglected.

BIOFIL LABORATORY

www.biofil.eu

Eight products and many applications

The serum phial cure at home

Sometimes, phial cures may also be considered. It's a more intensive treatment with average term effects. Which means that the cytology demands a cellular assimilation of the information. Sometimes this may take several weeks before seeing the optimal result appear. Despite this delay caused by the skin's natural process, the result cannot be compared with.

Serum Phials cure

This is a more intensive treatment with average term effects. It is made up of two boxes of 12 phials (all the same type or not) used in the following way :

The cure is made up of three parts : firstly, the administration of 12 phials, one every two days. Secondly, a rest period of 3 weeks should be respected. Thirdly, this cure ends with a further administration of 12 phials, one every two days.

Morning :

1. Cleansing of the face with Bio-active Milk and Lotion Milk.
2. Application of Phials Cellular serum - The rest time is approximately 5 min.
3. Application of the cream selected as day cream.

Evening :

1. Cleansing of the face with Bio-active Milk and Lotion Milk.
2. Application of the rest of Phials Cellular serum - The rest time is approximately 5 min.
3. Application of the cream selected as night cream.

Obviously, while carrying out the cure (which takes approximately 3 months), the milk, lotion and care cream continues to be used as :

Morning :

1. Cleansing of the face with Bio-active Milk and Lotion Milk.
2. Application of the cream selected as day cream.

Evening :

1. Cleansing of the face with Bio-active Milk and Lotion Milk.
2. Application of the cream selected as night cream.

BIOFIL LABORATORY

The serum phial cure at home

Regeneration Care

This care has a duration of one month with a rhythm of 3 days. The following products are recommended : Bio-active Milk, Lotion Milk, Intensive Cream, Bio-active Fluid, Mask-Cream, 12 phials of Cellular Serum.

FIRST DAY

Morning :

1. Cleansing of the face with Bio-active Milk and Lotion Milk.
2. Application of the Bio-active Fluid as day cream.

Evening :

1. Cleansing of the face with Bio-active Milk and Lotion Milk.
2. Application of the Intensive Cream as night cream.

SECOND DAY

Morning :

1. Cleansing of the face with Bio-active Milk and Lotion Milk.
2. Application of HALF of Phials Cellular serum - The rest time is approximately 5 mn.
3. Application of the Bio-active Fluid as day cream.

Evening :

1. Cleansing of the face with Bio-active Milk and Lotion Milk.
2. Application the rest of Phials Cellular serum - The rest time is approximately 5 mn.
3. Application of the Intensive Cream as night cream.

THIRD DAY

Morning :

1. Cleansing of the face with Bio-active Milk and Lotion Milk.
2. Application of the Bio-active Fluid as day cream.

Evening :

1. Cleansing of the face with Bio-active Milk and Lotion Milk.
2. Application of the Mask-cream - The rest time is approximately 15 mn.
3. Application of the Intensive Cream as night cream.

BIOFIL LABORATORY

www.biofil.eu

Eight products and many applications

Stretch marks

Metabolism

The stretch marks are caused by a purely mechanical phenomenon. A tightness on the skin (pregnancy, weight gain, ...) that causes a tightness in the "RETICULAIRE" fibres network.

These fibres have the same origin as the collagen, namely the Tropo-collagen. During the formation of the collagen fibres, the Tropo-collagens all gather in the same way. Whereas, in the case of the "réticulaire" fibres, the Tropo-collagens arrange themselves perpendicularly in such a way that they form a network. This will arrange itself in an intermediate layer between the dermis and the epidermis.

Therefore it is this network that can no longer stand the tightness and that will become distended, causing stretch marks. The only solution to avoid them is the prevention. Once appeared, it is possible to tone them down but the treatment can turn out very long and tedious because the application of the Intensive cream must be done daily.

Stretch mark prevention

The existing stretch mark treatment must not make us forget the possibility of prevention of such a problem. For this, during pregnancy, the Bio-active cream should be put on the stomach, thighs and bust daily during the first few months and the Intensive cream at the end of the pregnancy when the weight gain is more important.

Put the Bio-active Fluid on the legs every day for circulation problems. Follow the treatment during the quarter that follows childbirth so as to regenerate the the mother's vitamin reserves.

Recent stretch marks

We consider as recent stretch marks those that do not exceed six months of age. In this case, it is important to act with caution as they are still too «fresh». Consequently, a preparation period is necessary. It will be done with the use at home of a Bio-active lotion and Intensive cream. After, it may be possible to propose Intensive serum cures which accelerate the treatment.

Older stretch marks

A beauty centre care may be done directly composed of the Intensive serum. The frequency varies between one to three cares per month. At home, the Intensive cream will be used combined with Intensive serum phial cares.

BIOFIL LABORATORY

www.biofil.eu

Eight products and many applications

The Psoriasis

Origin

Discovered by Robert William (1757-1812), the psoriasis has a genetical origin and is considered as being part of the leprosy group. Three genes on the sixth chromosome have the « Psoriasis » information. The trigger factor is of an emotional type (stress, strong emotions, grief,...). To develop this skin problem, there must be a convergence between the genetic potentiality (HLA Marker) and the trigger factor.

Cellular metabolism

This genetic illness essentially concerns the keratinocyte cell carriers of the « Psoriasis » genes. Activated after an emotional shock, they take control of the cell and force it to reproduce itself faster. Hence an increase of polyhedral cells with a need of additional nutriments entailing an important blood inflow. As, unfortunately, the keratinization process is not influenced, this non-eliminated cellular surplus causes the skin consequences well known to this affection. It is to be noted that the keratinocytes act “under influence” but their cellular structure remains intact.

BIOFIL treatment

After a meticulous preparation with the Bio-active lotion, put the INTENSIVE cream on the zones concerned, every morning and evening. For more effectiveness, do not use too much of the product. The treatment is done in its totality at home.

The cytological action will be to supply the keratinocyte cells an information destined to calm the abnormal mitosis triggered off by the activation of the genes. Rapidly the skin regains its normal aspect and an organization of applications must be foreseen so as to prevent a further and more serious outbreak of the affection. The BIOFIL treatment, and as for that matter all others, cannot pretend to eliminate the Psoriasis. Therefore it remains a palliative. The solution would be to remove these three genes by genetic manipulation (which is not our subject).

The only medical treatment able to associate efficiently with BIOFIL is the PUVA therapy. Indeed, it consists in destroying the surplus polyhedral cells stemming from the excessive mitosis of the keratinocytes but without acting at the source. While BIOFIL acts at the source by limiting the mitosis process hence the production of polyhedral cells but without being able to act on the surplus already existing. This surplus having to be eliminated by the classical process of the keratinization. In this way, the combination of the two techniques may give an even more rapid result.

BIOFIL LABORATORY

www.biofil.eu

Eight products and many applications

The sun protection

This protection is made with the Bio-active Fluid. It owns a filtre whose exposure value is 14/16 which corresponds on our ladder to the index just under the sunblock (16). The particularity of this product is that it is possible to use it for all the phototypes, just as much with children as with adults. The trick is to « play » on the application frequencies in the following way :

- From the beginning of sun exposure until the appearance of a first tan, a small amount of fluid is to be put on the face and the whole of the body **HOURLY**. Obviously, depending on the phototype, the length of time for a tan to appear varies, and may never even appear, especially for the phototypes 0 - I
- From the tan to the more pronounced tanning, a small amount of fluid is to be put on the face and the whole of the body **EVERY TWO HOURS**.
- When the suntan has appeared, it is only necessary to put a small amount of the fluid on the face and the whole of the body **TWICE** a day, once in the **MORNING** and once in the **AFTERNOON**.

After **EVERY** exposure to the sun and the UVA, a small amount of Bio-active fluid should be put on the face and the whole of the body so as to both “fix” the tan but above all avoid too great a skin dehydration.

Following the example of all the Biofil products, the fluid contains cytological extracts in order to revitalize the cells and among others the “**MENALOCYTES**”. By this very fact, everyone who uses the fluid notices that it also acts as a sort of suntan activator.

It is for this reason that it is recommended to propose it to UVA beauty centre lovers - the fluid should be put on before and after every session - because the tan will be quicker, more harmonious and without risk as the skin will be constantly revitalized from the inside.

Finally, for children, especially the younger ones, who tend to be constantly out in the sun, there must be no hesitation in putting on the fluid at least once every hour. These applications should not stop the child or baby from being covered with a tee-shirt and a hat.

In the case where all these prescriptions have been respected, we can certify a harmonious, rapid and safe suntan because the regenerative and revitalizer aspect of the fluid is there to prevent all skin weaknesses.

Nevertheless, we can only recommend caution in this area because the UVA and especially the UVB radiances remain harmful for the skin and contribute to its premature ageing without forgetting the ever present risk of cancer.

BIOFIL LABORATORY

www.biofil.eu

Eight products and many applications

Special treatment

Annexed to all these standard beauty cares, BIOFIL offers the chance to start on an impressive series of more special treatments. It is impossible to describe them all, but two main classifications appear.

Problems of vascular origin (varices, varicose veins, ...) and of regenerator origin (eczemas, burns, chapping, ...). However, the control of the causes assures a long-lasting solution. Unfortunately, it is not always possible, while staying in the cosmetics domaine, to have this control.

It is pointless to say that in the case of eczema, only the healing and skin reinforcement effects may be kept. On the contrary, the slight burns, chapping, small stretch marks, bedsores due to prolonged bed confinement are solutioned rapidly. Excellent results are obtained for the treatment of pigmentation marks that are due to photosensibilization phenomena or ageing.

The venous problems have to be approached in a specific way. That is, firstly, an action on the vascularization with the Bio-active fluid by daily application on the legs, and secondly by an action on the regeneration with the Intensive cream and the intensive serum by local and regular applications. The union of these two aspects of treatment has for consequence to stabilize the phenomenon.

At the present state of knowledge, to eliminate the existing varices with cosmetic products is impossible. However, the venous treatment will have a contra-indication for all persons developing a cardio-vascular illness. Therefore, before undertaking the slightest treatment, medical advice should be sought.

Conclusion

Biofil is an original, global and particular concept that makes use of the strength of the cytological extracts. The knowledge in this domain is in perpetual progress and force is to recognize that the results obtained are there to prove the extreme efficiency of this avant-garde technology.

The practical application of this file and the products enable to create credible and personal treatments.

BIOFIL, the Passion of Efficiency

BIOFIL LABORATORY

www.biofil.eu

Eight products and many applications

Attestations

When suffering from **Psoriasis** in March 1997, I used beauty products from the BIOFIL Laboratory on my skin. After two months of daily applications, I noticed with satisfaction the total disappearance of all traces of the problem. Since June 1997, no new traces of psoriasis have reappeared.

Mr. F. Tutenel

Rue Gribelle, 3

B - 5575 Gedinne

Suffering from **Psoriasis** for many years, I tried all sorts of products without observing the slightest effect. Therefore, after being informed by my beautician of the results obtained with the Biofil products, every morning I rubbed into the affected zones and notably into the scalp, the **Bio-active Fluid**. Two months later, no further traces were visible. Due to this, a year later I consider myself as "cured". I would like everyone suffering from psoriasis to one day try the Bio-active Fluid.

Mrs. Ilona Pfeiffer

Neue Weg, 28

B – 4750 Weywertz

The skin on my face was very spoilt (**dry skin, blackheads**, etc.). I had tried in vain different brands before using the Biofil products. These, after only a few days, brought me a true well-being. Since, my skin has found its radiance and softness again, it is no longer dry and the blackheads have vanished. I have at last found a healthy and supple skin. I greatly recommend these products as I have never before had results so convincing and rapid.

Mme C. Pizzuto

Place de Trèves, 6

F – 54500 Nancy
